

Three acute EAE cohorts

GSE199460 Brain 2 EAE and 3 controls
GSE210776 Spinal cord 4 and 3
GSE95401 Spinal cord 3 and 3
One expression profile per animal

Two chronic active MS cohorts

Human 1 GSE279183
4 MS and 6 control donors
Human 2 Macnair cohort I 7 and 4
Endothelial nuclei combined by donor
Chronic active lesions and control WM

Comparable effects across five cohorts

6,611 archived strict orthologues and the same effect estimator
All ten cohort pairs with animal and donor resampling
Eleven focused functions with explicit gene coverage

Human endothelial checks

Source annotated endothelial subtypes
Capillary restriction in the same donors
Sensitivity to tissue bank and cell yield

Spatial and functional context

Local regions in GSE279183
and GSE284005
Lesion categories in GSE208747
Separate published barrier measurements
